

## Dental Veneers: A Secret to Hollywood Smile

Zac Efron, Tom Cruise, Taylor Swift, and Celine Dione are some Hollywood stars that are famous for their smiles. Did you know that they have dental veneers applied to their teeth? Most likely not. This is because veneers are similar to natural teeth and are a perfect fit for those of you who want a picture-perfect smile.

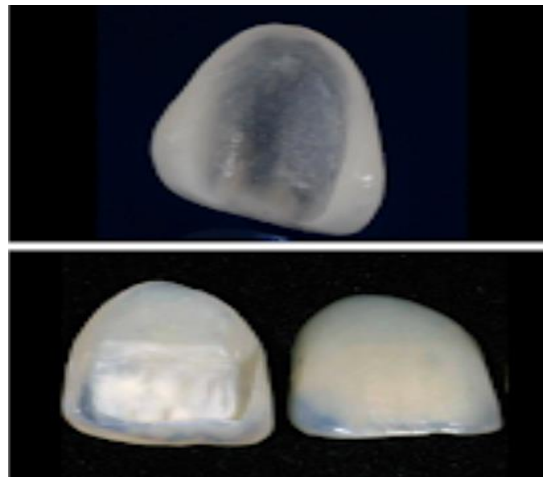

### Why Dental Veneers are a perfect fit for you

- **Naturally Appealing**

The selection of diamond jewelry is done by its color; the whiter, the better. The way the jeweler grades a diamond is by bringing the diamond close to a set of color-coded one which matches the real diamond. A similar process is followed by a dentist in the selection of veneers.

- **Younger looking glow**

Porcelain is a widely used material for dental veneers. Owing to their strength and shade quality, porcelain veneers can give your teeth a dazzling white, younger-looking glow.

Using porcelain veneers, the strength of your natural teeth can be retained. The only modification required by your dentist would be the reduction of 1/2mm of enamel surface, i.e., equivalent to the size of a contact lens.

- **Reflection of your Personality**

Your business relationships are affected by the quality of your smile. Most people in North America say that a good smile makes a person more attractive. In addition, 75% of Americans agree that an unattractive smile decreases the chances of financial success. This makes your smile a matter of serious concern in day-to-day life.

Dental veneers are made of tooth-colored material, which is why they are a perfect fit for appealing smiles.

- **Instant orthodontics**

If gaps, crooked, or rotated teeth keep you from smiling, dental veneers can be a lifesaver as you'll be smiling after two dental sittings.

Dental veneers can respace and realign your teeth. They can also straighten teeth that are torsoverted (rotated). Because of the aforementioned, years of wearing braces may not be required to straighten one or two misaligned teeth.

- **Complete Procedure in two Dental visits**

Unlike lengthy procedures like orthodontic treatments, dental veneer application can be completed in 1 to 2 dental visits. This means you'll get a perfect Hollywood smile and its associated charms in as little as two sittings.

- **Painless Procedure**

Statistics show that around [28%](#) of people in the U.S. avoid visiting a dentist because of the fear of dental pain. Are you someone that goes by the phrase, "I don't want to get hurt at all"? If so, then no worries, as dental veneer application is a pain-free procedure if done by the right dentist.

The dentists in our practice use the technique of pain-free injection. Owing to the smooth process, you might fall asleep during the procedure.

You will look in the mirror and see a whole new you smiling back at you! There will be little pain (probably none whatsoever) because our dentist will use the painless injection technique as mentioned earlier. The change it will make in your life might be.... priceless!

## **Dental Crowns or Dental Veneers: Which one is better**

If we take two patients; one with a crown and the other with veneers, you won't be able to tell the difference between the two. You might end up using the terms interchangeably, which would be incorrect. Labeling one as a better option over another entirely depends on the function for which it is to be used.

In terms of smile and esthetics of the four front teeth, dental veneers are a better option as they require less preparation than crowns (prep. up to 2mm). On the contrary, if you have a root canal done, crowns are a go-to for you.

### **Bottom line:**

Dental veneers are a go-to for you if you're seeking to have a million-dollar smile. Owing to the amazing results, many Hollywood stars have opted for veneers. The reasons you should choose dental veneers for a dazzling smile have been mentioned in the article.
