

INTRODUCING..... THE ARCTIC STEAMER

ICE DAM PROBLEM:

Ice will form from melting snow and make an ice dam, water will pool behind this dam, hide under the snow and seep into the building. Water can damage insulation, drywall, electrical systems and may lead to rotting wood and mold.

The weight of the ice could also cause damage when it breaks free and is a potential liability hazard if an injury would occur.

ICE DAM SOLUTION:

The Arctic Steamer is the only steamer designed for use in cold temperatures to remove ice.

-Remove the ice dam in the safest and most effective way.

-The spray from an Arctic Steamer is gentle and will not damage a roof like a pressure washer, hammer or pick ax could.

-The use of chemicals and ice melting products can cause a larger problem as more snow and ice melt and turn into liquid.

Pricing starts at \$400.00/hour
for (2) men and the machine
